

Simultaneous topology and fastener layout optimization of assemblies

Olaf Ambrozkiwicz, Benedikt Kriegesmann

- part replacement with fixed connections
 - restricted optimization potential
 - risk: new design worse for connected part

- simultaneous optimization of
- parts (topology)
 - locations of joints

Optimization problem

fail-safe objective

$$\min_{\boldsymbol{\rho}, \mathbf{x}} \max_k c_k \quad \text{for } k = 1, \dots, n_J$$

~ KS function

s.t. $\mathbf{0} \leq \boldsymbol{\rho} \leq \mathbf{1}$

$$\underline{\mathbf{x}} \leq \mathbf{x}_i \leq \bar{\mathbf{x}} \quad \text{for } i = 1, \dots, n_J$$

$$\frac{V_P}{V_0} \leq v_P \quad \leftarrow \text{volume constraints per part}$$

$$\tilde{\mathbf{K}} \tilde{\mathbf{u}} = \tilde{\mathbf{f}}$$

min distance of joints

$$d_0 \leq \min_{i \neq j} d_{ij} \quad \text{for } i, j = 1, \dots, n_J$$

~ p-norm (reciprocal)

Equilibrium system

$$\tilde{\mathbf{K}} \tilde{\mathbf{u}} = \tilde{\mathbf{f}}$$

$$\left[\mathbf{K}_m(\boldsymbol{\rho}, \mathbf{x}) + \mathbf{K}_c + \mathbf{G}(\mathbf{x}) \right] \tilde{\mathbf{u}} = \tilde{\mathbf{f}}$$

coupling terms: \mathbf{G}

$$\begin{bmatrix} \begin{bmatrix} \mathbf{K}_m^1 & & \mathbf{0} \\ & \ddots & \\ \mathbf{0} & & \mathbf{K}_m^{n_P} \end{bmatrix} & \mathbf{0} \\ \mathbf{0} & \begin{bmatrix} \mathbf{K}_c^1 & & \mathbf{0} \\ & \ddots & \\ \mathbf{0} & & \mathbf{K}_c^{n_J} \end{bmatrix} \\ \mathbf{G} & \mathbf{0} \end{bmatrix} \begin{bmatrix} \mathbf{u}_m^1 \\ \vdots \\ \mathbf{u}_m^{n_P} \\ \mathbf{u}_c^1 \\ \vdots \\ \mathbf{u}_c^{n_J} \\ \boldsymbol{\lambda}_c^1 \\ \vdots \\ \boldsymbol{\lambda}_c^{n_J} \end{bmatrix} = \begin{bmatrix} \mathbf{f}_m^1 \\ \vdots \\ \mathbf{f}_m^{n_P} \\ \mathbf{0} \\ \vdots \\ \mathbf{0} \end{bmatrix}$$

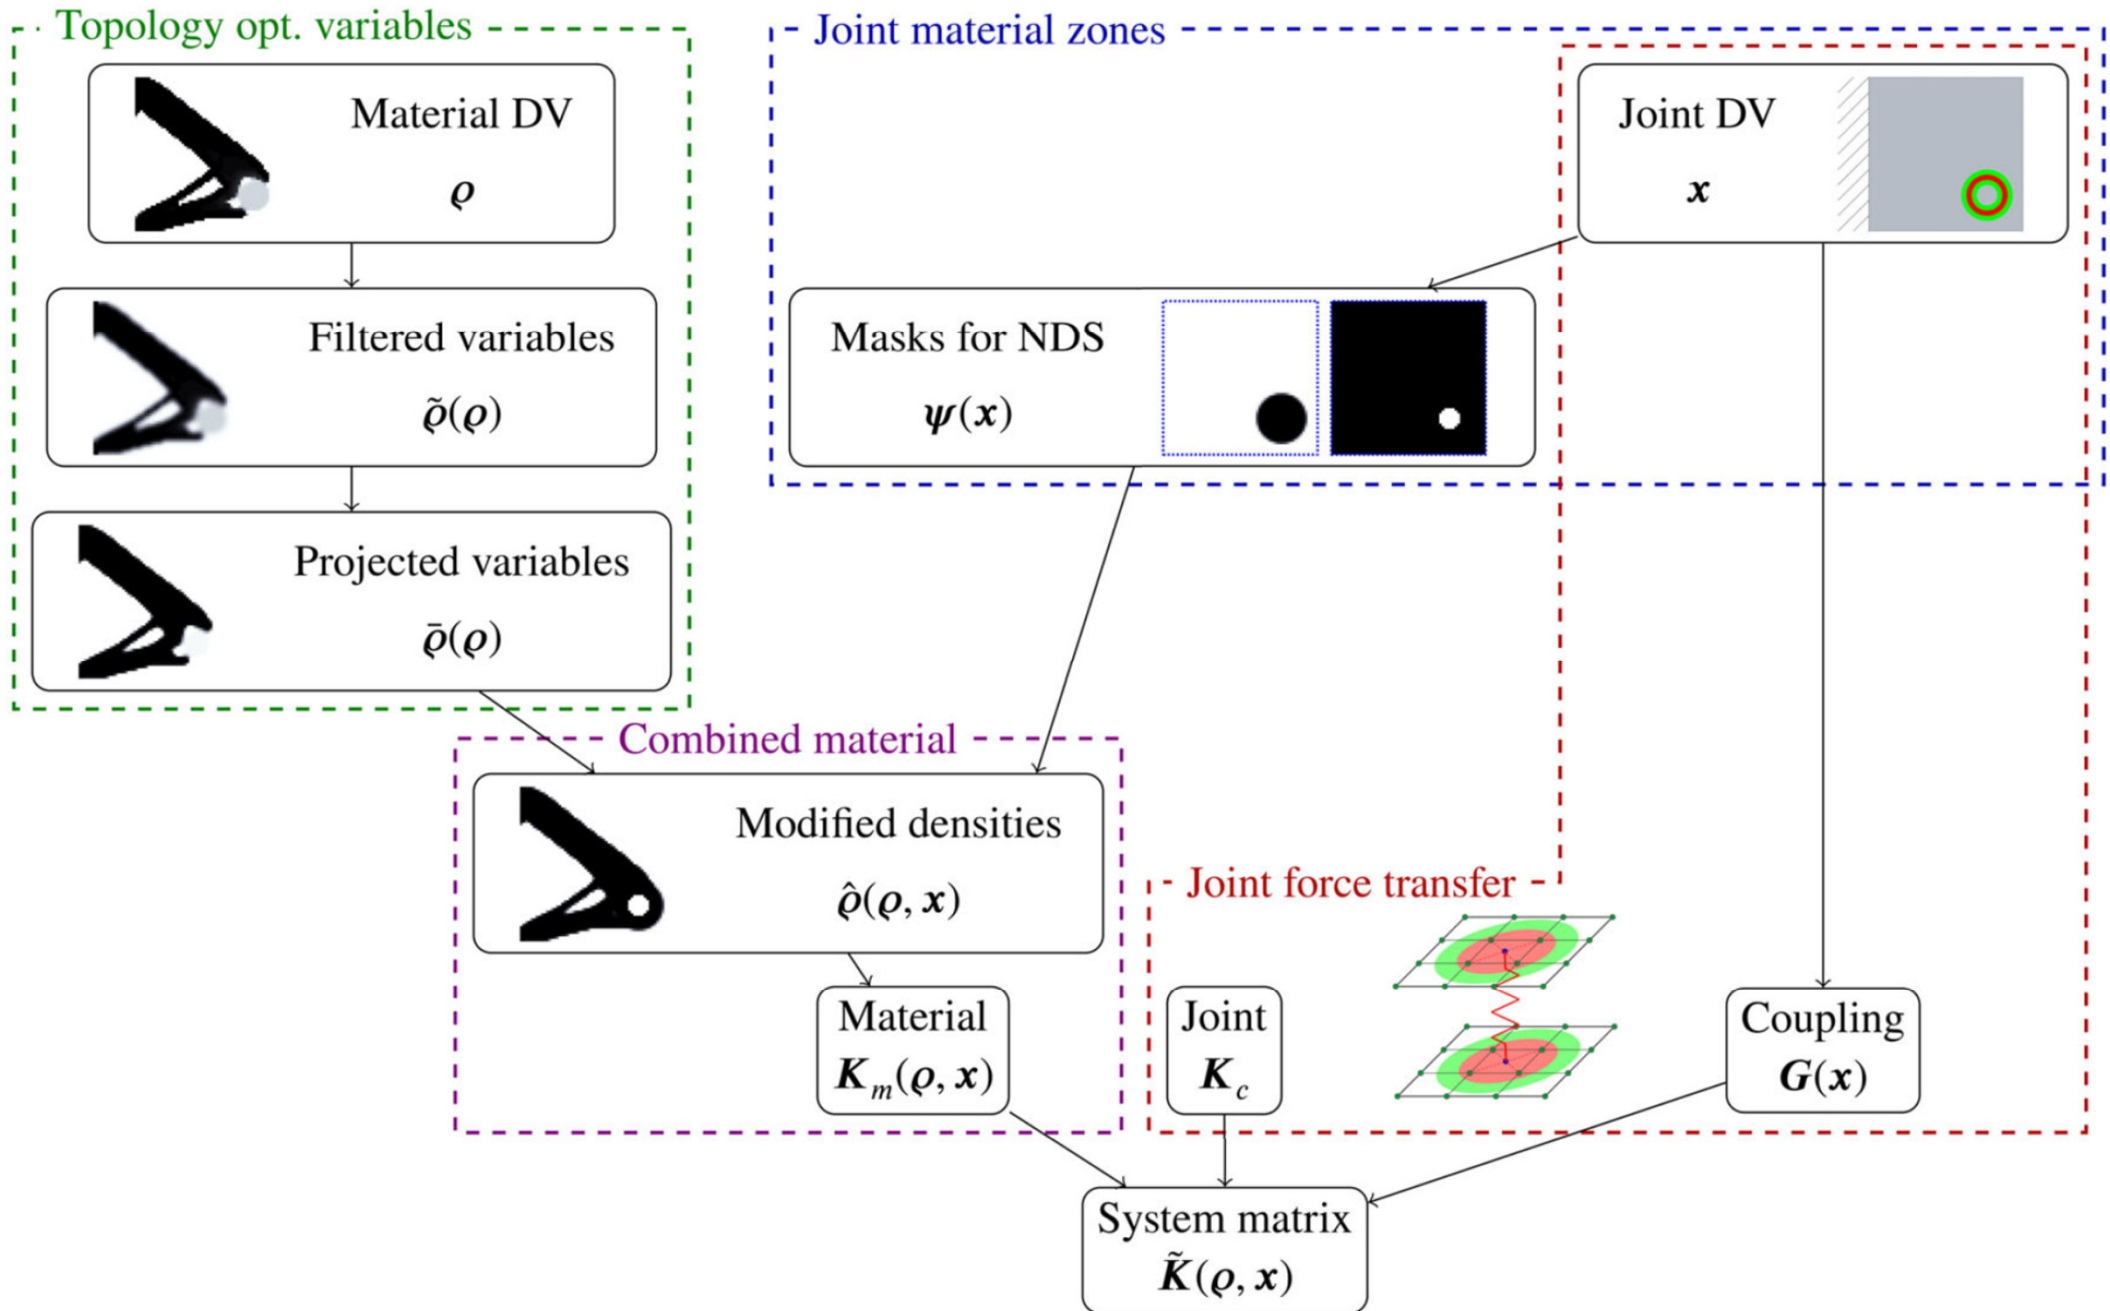

e.g. spot weld

e.g. bolt

Overall approach

2D example – 2 joints

(a) Left part

(b) Right part

(a) Left part

(b) Right part

two bolt joints

two spot joints

2D example – 2 vs 4 joints

(a) Left part

(b) Right part

two bolt joints

= four bolt design without min distance

(a) Left part

(b) Right part

four bolt joints, with min distance

2D example – 4 joints – fail-safe

$$\min_{\rho, x} \max_k c_k \quad \text{for } k = 1, \dots, 4$$

four bolts, fail-safe

four bolt joints, with min distance

3D example

four-bolt design

fail-safe design

Concluding remarks

- number of joints prescribed, but maybe not load carrying
- number of joints design variable
→ half joints
- extension to
 - strength
 - max joint force
- L-bracket example
→ see paper
